Summary

Mid-level full-stack software developer with 2.5 years at INOX building the systems behind Thai PBS's election coverage (**500k+ peak concurrent requests**), an agent engagement game, and AI newsroom tools. TypeScript and Node.js across the stack, React on the front end, and Kubernetes, CI/CD and AWS, GCP and Cloudflare in production. Open to mid-level software engineer or full-stack roles, hybrid or remote.

Experience

Innovative Extremist (INOX) — Chatuchak, Bangkok
Mid-level Software Developer — 09/2026 – Present
Software Developer — 05/2024 – 09/2026

- Built the results worker for **Local Election 68**'s live results (47 provincial chief and 76 council races): cron jobs that turned hand-entered SeaTable results into versioned JSON on **S3 behind CloudFront** (30-day immutable revisions, a 10-second index), serving **500k+ peak concurrent requests** from cache on election night.
- Built the results producers and cron workflow for **Bangkok Governor & Council Election 69** (official election API to MongoDB to versioned JSON on S3), plus **admin uploads** for candidate images and party logos and a **streamer mode** for broadcast.
- Migrated a designer's prototype of **Next Station BKK**, Thai PBS's citizen review platform, into a strict **TypeScript, Vite, React 19 and TanStack Router** app with feature-based structure, and built the **BFF contract layer** that wired it to the real API.
- Added **animated vote counters** and fixed seat-summary filtering by region on Thai PBS's national **Election 69 results**.
- Built full-stack features for an insurance company's **agent engagement game**: passkey login, quiz engine and rewards, check-in streaks, an AI personality quiz and chat dashboard, and an **event-driven notification system** that batches jobs; worked on its **ArgoCD/Kustomize** deployment across Dev, UAT and Production, with media on Cloudflare R2.
- Wrote Thai PBS's **Gemini news-summary service** (multi-language, prompts managed in Strapi) and, in the shared audio service, added **Google text-to-speech** alongside Botnoi and **speech-to-text word timings** for Read Along highlighting.

King Mongkut's Institute of Technology Ladkrabang — Lat Krabang, Bangkok
Teacher Assistant (part-time) — 12/2023 – 03/2024

- Assisted teaching STM32 microcontroller courses in C; graded lab assignments and supervised lab exams.

Sufcreate co., ltd. — Bangkok (remote)
Freelance Software Developer — 08/2022 – 12/2022

- Subcontracted to build a football penalty game web app for **The Mall Group**'s **FIFA World Cup Qatar 2022** campaign, integrated with the M Card loyalty app. Ran deployment on Ubuntu/DigitalOcean with monitoring and logging: **zero downtime** through the campaign.

Projects

License Plate Recognition with TrOCR: OCR stage of an external LPR system using a TrOCR transformer. — 08/2023 – 11/2023

Skills

Languages: TypeScript, JavaScript, Python, Go (basic)
Frontend: React, Next.js, TanStack Start, TanStack Router, TanStack Query, Zustand, Tailwind CSS, motion
Backend: Node.js, Fastify, tRPC, Payload CMS, Mongoose, Drizzle ORM, RabbitMQ
Databases: MongoDB, PostgreSQL, MySQL, Redis
Infrastructure: Docker, Kubernetes, AWS (S3, CloudFront, EC2, Lambda), GCP (Vertex AI, Gemini, Cloud TTS/STT), Cloudflare R2, CI/CD (GitLab CI, ArgoCD, Kustomize, Jenkins)
Testing & Tools: Vitest, Playwright, Bruno, Strapi, Figma
Certifications: Manage Kubernetes in Google Cloud (Skill Badge), Go (Basic)

Education

King Mongkut's Institute of Technology Ladkrabang — Lat Krabang, Bangkok
Bachelor of Engineering, Computer Engineering. GPA: 3.6 — 03/2024
Relevant Coursework: Software Process Development, Object-Oriented Programming, Introduction to Cloud Architecture, Deep Learning, Machine Learning
