Summary

Mid-level Software Developer with 2.5 years at INOX building the systems behind Thai PBS's election coverage (**500k+ peak concurrent requests**), gamification platforms, and AI newsroom tools. TypeScript/Node.js full-stack with hands-on Kubernetes, CI/CD, and cloud (AWS, GCP, Cloudflare). Open to full-stack or backend roles, hybrid or remote.

Experience

Innovative Extremist (INOX) — Chatuchak, Bangkok
Mid-level Software Developer — 09/2026 – Present
Software Developer — 05/2024 – 09/2026

- Built the backend for **Local Election 68**'s real-time reporting platform solo (47 provincial chief and 76 provincial council races), sustaining **500k+ peak concurrent requests** on election night. Sole backend implementer on a 2-person team; senior engineer handled infrastructure planning.
- Built frontend and backend for Thai PBS's live **Bangkok Governor & Council Election 69 results** site: candidate ranking overview, a **50-district hex-tile map** with infographic/map views and district search, and the results API.
- Migrated **Next Station BKK**, Thai PBS's citizen review platform for the Bangkok Governor election, from unstructured React JavaScript to **TypeScript, Vite, and TanStack Router** with feature-based architecture. Built a **custom SVG district map** from scratch (standard mapping libraries didn't fit Bangkok's irregular layout on mobile) and set up the BFF layer.
- Built an **interactive seat summarization feature** with regional filtering for Election 69's results interface, giving users a real-time breakdown of parliamentary seat distribution by region.
- Took full vertical ownership of **The Heroes SS3** gamification platform: **quest system, quiz engine, and daily login streaks** across frontend and backend, plus a **back-office dashboard** for AI chat stats, notification triggers, and user-level diagnostics. Set up **CI/CD pipelines** (ArgoCD, Kustomize) across Dev, UAT, and Production.
- Built backend integrations for Thai PBS's AI editorial tools, solo: a **news summarization pipeline** (Google Gemini), an English **audio generation extension** (Google TTS), and a **Read Along** feature using STT APIs for karaoke-style highlighting on long-form articles. Editorial staff reported meaningfully reduced manual workload.

King Mongkut's Institute of Technology Ladkrabang — Lat Krabang, Bangkok
Teacher Assistant (part-time) — 12/2023 – 03/2024

- Assisted teaching STM32 microcontroller courses in C; graded lab assignments and supervised lab exams.

Sufcreate co., ltd. — Bangkok (remote)
Freelance Software Developer — 08/2022 – 12/2022

- Subcontracted to build a football penalty game web app for **The Mall Group**'s **FIFA World Cup Qatar 2022** campaign, integrated with the M Card loyalty app. Ran deployment on Ubuntu/DigitalOcean with monitoring and logging: **zero downtime** through the campaign.

Projects

License Plate Recognition with TrOCR: OCR stage of an external LPR system using a TrOCR transformer. — 08/2023 – 11/2023

Skills

Languages: TypeScript, JavaScript, Python, Go (basic)
Frontend: React, Next.js, Tailwind CSS, Zustand, Jotai, TanStack Query, TanStack Router
Backend: Node.js, Fastify, tRPC, Drizzle ORM, Mongoose
Databases: MongoDB, PostgreSQL, MySQL, Redis
Infrastructure: Docker, Kubernetes, AWS (EC2, S3, Lambda), GCP, Cloudflare R2, CI/CD (GitLab CI, ArgoCD, Kustomize, Jenkins)
Testing & Tools: Vitest, Playwright, Figma, PayloadCMS, Strapi
Certifications: Manage Kubernetes in Google Cloud (Skill Badge), Go (Basic)

Education

King Mongkut's Institute of Technology Ladkrabang — Lat Krabang, Bangkok
Bachelor of Engineering, Computer Engineering. GPA: 3.6 — 03/2024
Relevant Coursework: Software Process Development, Object-Oriented Programming, Introduction to Cloud Architecture, Deep Learning, Machine Learning
